Dear Mr. Breitenbach,

Please adopt a CALFED plan that:

- * maximizes water conservation and doesn't cater to high demands, which are ~~exaggerated~~ and environmentally unsound
- * removes barrier dams, increases instream flows
- * acquires and restores habitat
- * is sustainable
- * enforces strict pollution limits.

California can't have an infinitely growing population using ever more water and resources. We need to start living ^{within our limits} to protect our environment for the future. Thank you,

Rena Mayyan
